Experience

EdTech Software Engineer Sept 2023 – Oct 2026

Isaac Science *Cambridge, UK*

- Led a year-long major redesign of the platform's website, comprising of a complete overhaul of the UI, accessibility, and subject theming. Worked with external designers to define the style for a focused subset of pages, then developed designs for the remaining pages while implementing everything in React.
- Started and maintained a Figma component library, with an aim to keep new features consistent in style.
- Contributed to Raspberry Pi's design system for our sister platform, including iterating with their design team on user flows, landing pages, and 11-14 content – then implementing these under a tight deadline for the school year.
- Upgraded the build system from Webpack to Vite to cut build times on the slowest dev machines down to seconds.
- Assisted with an ongoing effort to modernise endpoints with RTKQ.
- Maintained and extended multiple suites of tests built with Jest, Cypress, and Playwright, and drastically improved the reliability of particularly flaky visual regression tests from around 50% to 100%.
- Discovered and patched two security vulnerabilities in the Java backend of the platform.
- Gave technical talks to the team on accessible design (WCAG 2.2, ARIA, etc), SCSS, colour theory, and more.
- Onboarded four new developers, both junior and senior.
- Contributed to the wider university outside of the direct job description, including supervising undergraduates, assisting a PhD project using our code, and running admissions interviews.

Software Engineer July 2022 – Oct 2022

Cisco *London, UK*

- Worked on Cisco's Data Loss Prevention engine, a cloud-based network traffic analysis engine with an aim to data leaks before they reach the wider internet.
- Developed a user-facing Java application to efficiently encrypt company data to upload to Cisco's SWG.
- Worked with proprietary APIs, in one notable case discovering and providing a solution to a major inefficiency affecting several Cisco products.

Education

University of Cambridge Sept 2020 – July 2023

Bachelor of Arts in Computer Science, 2:1 (70.1%) *Cambridge, UK*

Projects + Research

Web Design Series | *Figma, React* Sept 2026 – Present

- An exploration into styles of web design, focusing on the perception of layouts, colour palettes, and typography.

Yawning Detection | *Python, Tensorflow, SciKit-Learn, Flutter* Nov 2022 – Aug 2023

- An award-winning dissertation-turned-scientific-paper developing a novel method of drowsiness detection using spatial data from head-tracking earphones.
- Data was collected from 10 users performing a variety of tasks while wearing the earphones, and 10 distinct model types (neural net and classical) were trained over the data to determine their suitability for task detection.
- Continued to work through the summer to produce a paper that was accepted to the SmartWear 2023 Workshop.

Technical Skills

Languages: JavaScript/TypeScript, CSS/SCSS, Python, Java, SQL, Dart
Frameworks: React, Vite, Node.js, Flutter
Developer Tools: Git, Docker, Plausible, VS Code, IntelliJ
