jacbn

hello@jaycie.me

jaycie-bn

With a strong history graduating web features from ideation to prototype to implementation, I have a passion for bringing well-considered, intuitive interfaces to life, while keeping them accessible to all. My deep knowledge of web design, accessibility standards and HCI ensure my user flows and their implementations remain clear and logical throughout.

● Isaac Science

Sept 2023 - Oct 2026 · React, Figma, SCSS, Git

Building the Isaac platform, with a focus on front-end and design.

- Led a major redesign of the platform's website, comprising of a complete overhaul of the UI, accessibility and theming.
- Started and continuously maintained a Figma component library design system, with an aim to keep new features consistent in style. This was inspired by Raspberry Pi's design system for our sister platform, to which I also regularly contributed - including iterating with their design team on both user flows and screens for landing pages and content listings for a new collection of 11-14 content.
- Onboarded three new developers to the team, and have given talks on accessible design (WCAG), quality CSS, colour theory and more.
- Contributed to the wider university outside of the direct job description, including supervising undergraduates, assisting a PhD project using our code, and running admissions interviews.

● Cisco

2022 (3mo) · Java, Git

Working on Cisco's Data Loss Prevention engine, a cloud-based network traffic analysis engine to prevent data leaks.

● University of Cambridge

2020-2023

I achieved a **2:1** (70.1%) in my BA Computer Science. After my third year, I also published my award-winning dissertation on drowsiness detection as a scientific paper.
